SERIAL NO.: n/a (Nat. Phase of PCT/IL2003/000779)  
I.A. FILED: September 29, 2003

## AMENDMENTS TO THE CLAIMS

Kindly amend the claims as follows:

1. (original) Protecting the invention will be based on the principle of the proposed device which causes the generator(s) to rotate the rotor(s) and the stator(s) in opposite directions in order to generate more electrical power energy than conventional generators.
2. (original) Protection of the invention will be based on the principle of the method of the device which comprises many parts and diverse materials, in a certain methodology and constitutes a whole system which makes the rotor(s) and stator(s) in generator(s) counter-rotate, in this way performing an operation necessary in order to generate electrical power energy which is different from normal presently existing conventional systems and produce more electrical power energy.
3. (original) Protection of the invention will be based on the principle and mode of operation by means of the above mentioned device when the driving force is wind force, water force from a dam, a gas jet, an internal combustion engine or any source of rotational force whether by using fuel and/or other means and provided that the device will be integrated creating counter-rotation of the rotor(s) and stator(s) in the electric power generator(s) and more electric power energy will be produced.
- 4-5 (cancelled)
